Revisions

REV	DESCRIPTION	DATE
A	Final draft	February 2026

Why Exemplar Designs?

Merri-bek is changing quickly as more people are choosing to make our community their home. This rapid growth means we must find ways to increase the supply of quality homes that are well planned and improve the liveability of our city.

In line with our draft Council Plan 2025-2029, we aim to facilitate high-quality built form outcomes. The State Government's Housing Statement set ambitious targets to boost housing supply, with a strong emphasis on increasing density near existing transport routes and services.

This document responds to the multifaceted challenges of housing growth today - including rising construction and labour costs - and explores how to deliver quality outcomes within this environment.

The Exemplar Designs in this document are intended to guide and encourage designers, developers and applicants to deliver better-quality developments in Merri-bek. The Exemplar Designs demonstrate layouts that:

- comply with **Clause 55**,
- consider better use of the ground plane,
- feature efficient and repeatable built forms, and
- have broad appeal within the Merri-bek context.

What are Exemplar Designs?

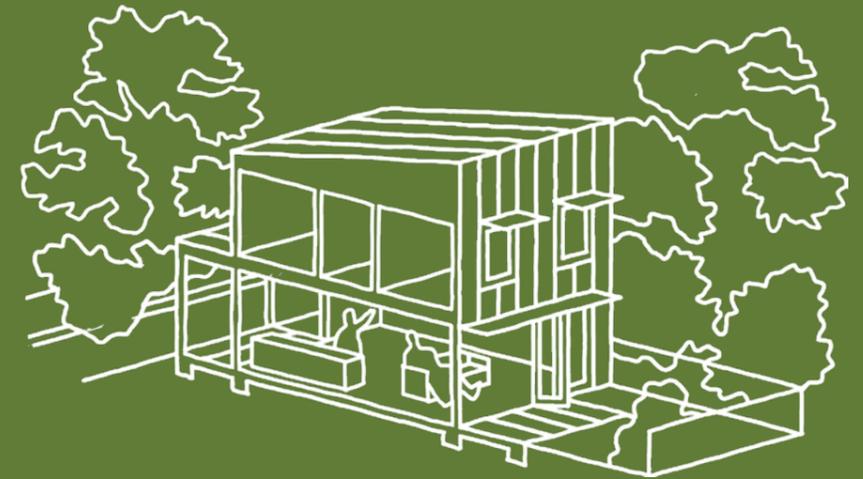

The Exemplar Designs demonstrate practical, well considered design responses to typical townhouse development scenarios in Merri-bek. They showcase best practice approaches to site planning, dwelling configuration and architectural expression - illustrating how quality design outcomes can be achieved with **Townhouse and Low-Rise Code** compliance.

Council engaged architectural practice, Six Degrees Architects to prepare exemplar designs for guidance tailored specifically to Merri-bek's urban context.

Eight exemplars represent five typical and commonly occurring lot widths between 12.2m and 20m. Each exemplar is simple, scalable and adaptable, responding to varying lot depths, orientations and contextual constraints. Lot width is the critical metric in selecting an appropriate exemplar, with individual lot depth determining the potential yield.

The Exemplar Designs are tested against Clause 55 Deemed to Comply standards. Car parking provision assumes 1 parking space per dwelling is required.

They are practical examples of how planning scheme requirements and Merri-bek design objectives can be met to deliver better quality development for everyone.

How to use the Exemplar Designs?

Applicants are encouraged to use these Exemplar Designs, in part or in full, to develop context-specific proposals. Not all designs will suit the site dimensions shown as each individual site has unique conditions. While based on eight typical lot configurations, the principles can be adapted to a broad range of sites and settings.

All applications will be assessed against Planning Scheme requirements. Design proposals must always consider:

- site orientation
- site and street topography
- existing site features
- existing streetscape character
- surrounding context including impacts on neighbouring properties

The Design Principles section includes images for additional visual description and design inspiration.

This is a Better Quality Developments document and should be used in conjunction with the [Good Design Advice Sheets](#).

Lot 7 Exemplar on 18.3m wide corner lot with shared parking 18.3 x 42m, 769m ²	22
Lot 8 Exemplar on 20m wide lot with private garages from shared access 20 x 40m, 800m ²	23

Design Principles

Analysis of recent townhouse developments in Merri-bek revealed a lack of ambition in terms of supply and quality, in areas well serviced by public transport.

In response to recurring development trends, the Design Principles outline opportunities to improve key aspects of townhouse developments.

While the Design Principles highlight specific opportunities to improve design outcomes, the accompanying images help to portray ideas and solutions which cannot be expressed in plan form.

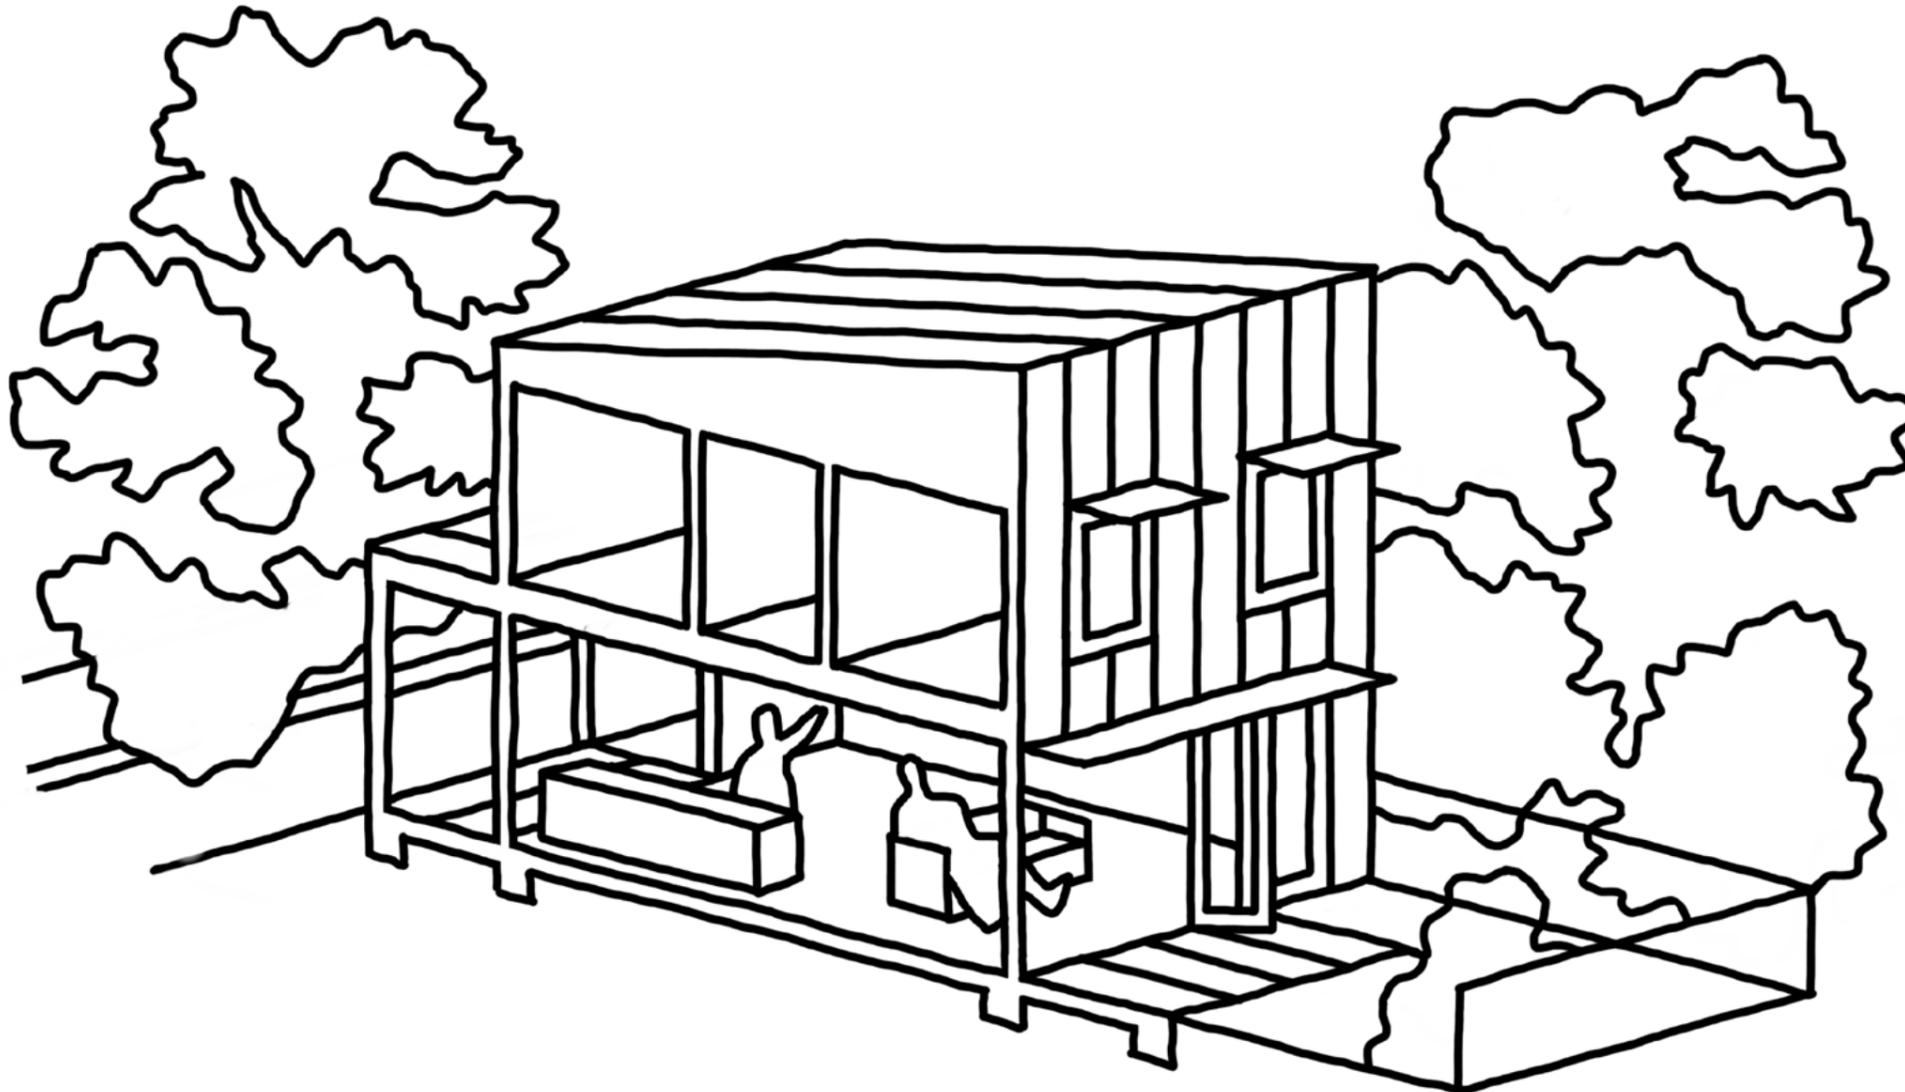

Better use of the ground plane

The ground plane is the ideal level for a number of competing uses such as living space, open space and vehicle circulation.

Better use of the ground plane considers reducing the area dedicated to vehicles and increasing space for higher value ground floor living, open space and canopy trees.

By minimising costly vehicle infrastructure and thoughtfully arranging open space, all dwellings can benefit from improved access, outlook and connection to quality landscaped environments.

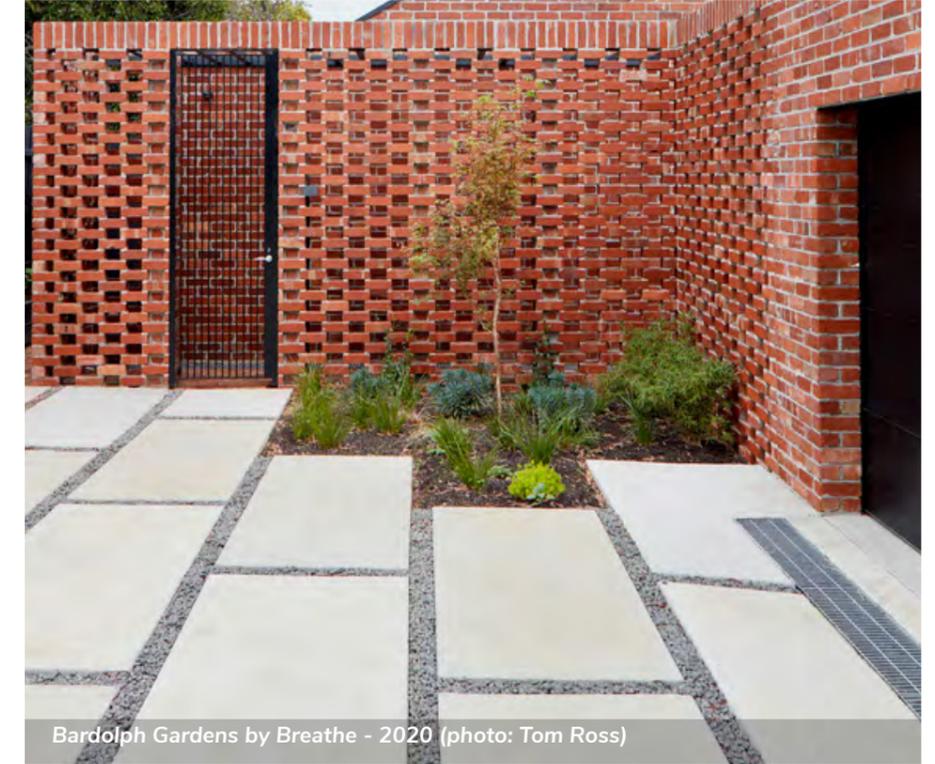

Better use of the ground plane

Generous ground level open space

Living spaces that connect with the outdoors

A welcoming common driveway space

Balancing access with green

Room for canopy trees

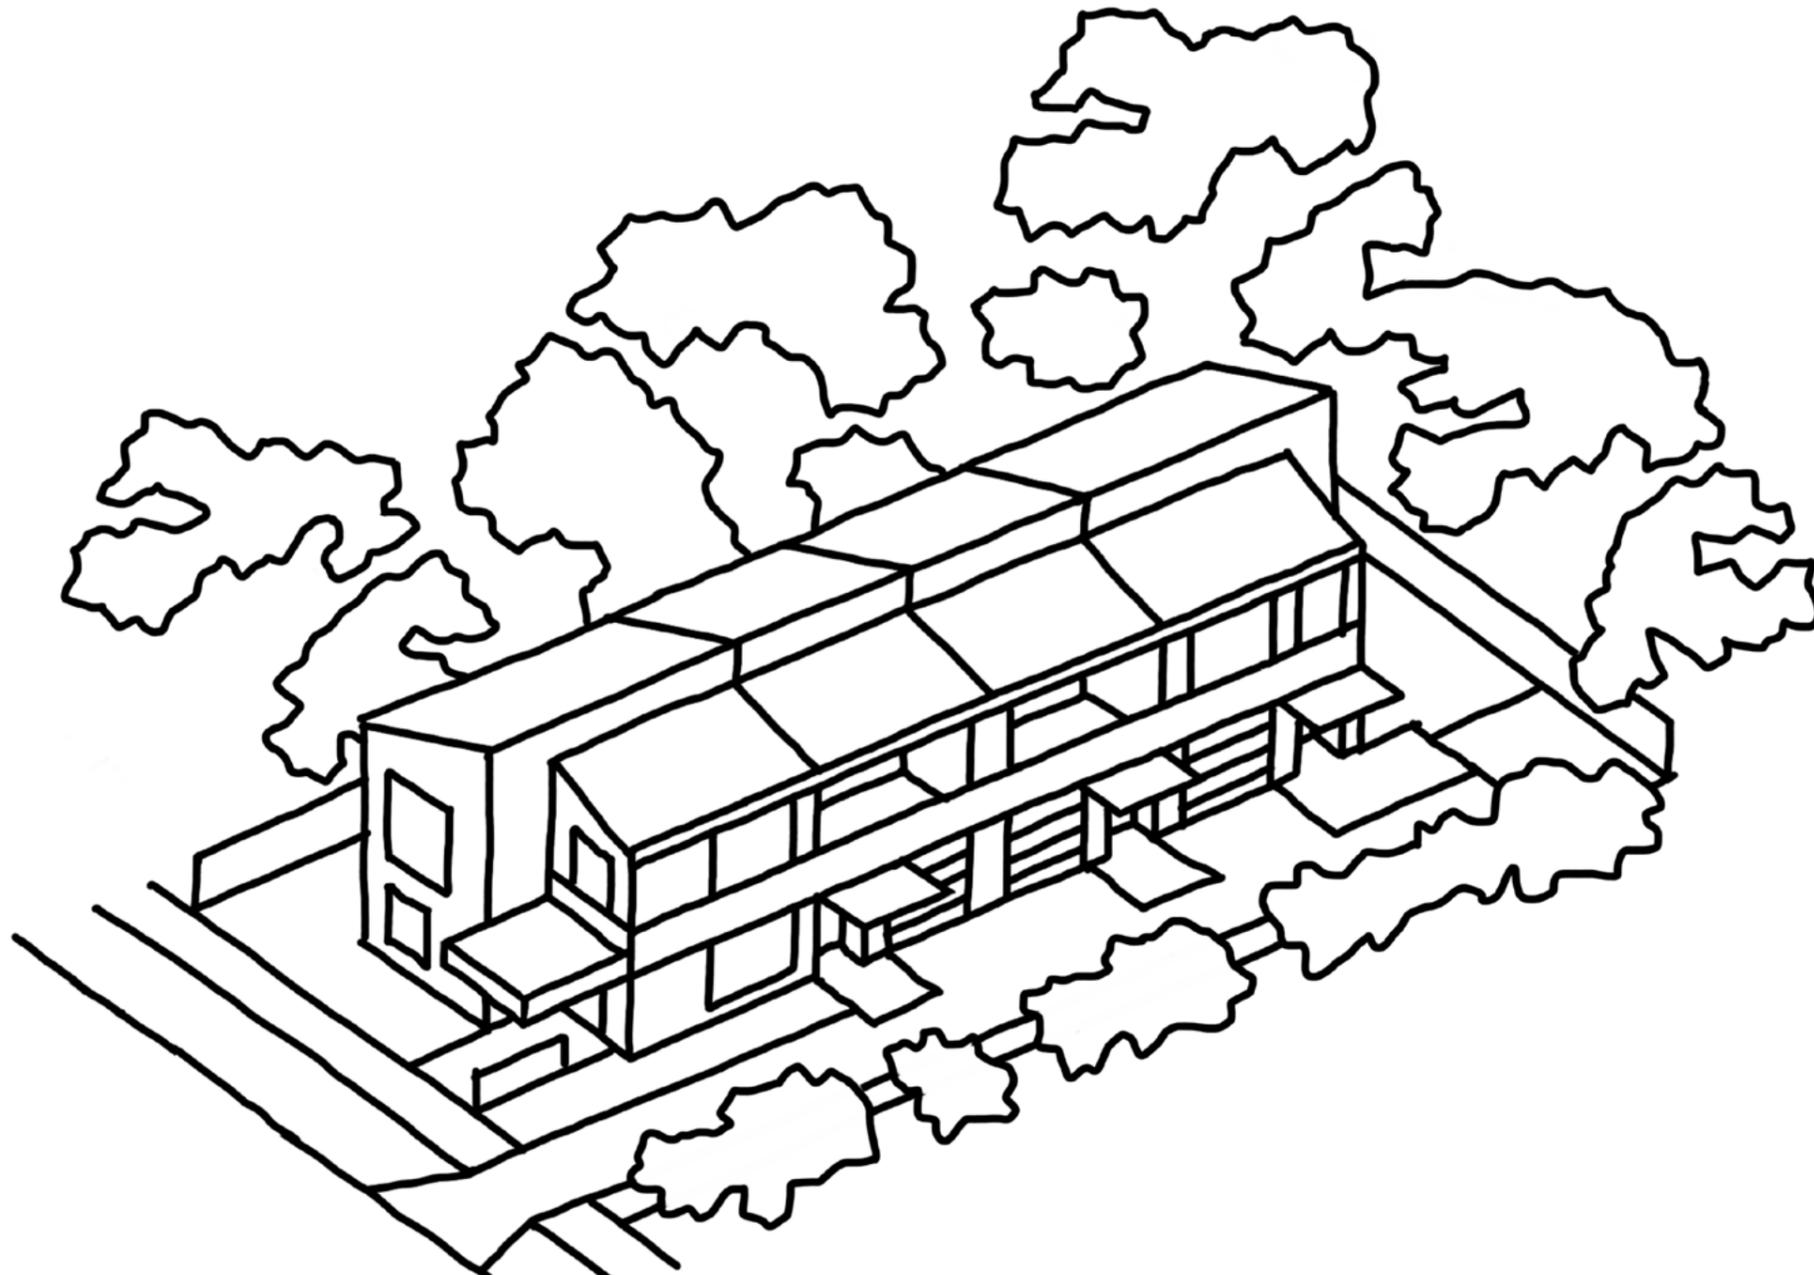

Car spaces allowing flexible use

Efficient and repeatable built forms

Complicated building forms increase construction costs and can lead to delays, so simple, well-proportioned forms using high-quality materials are recommended.

Efficient and repeatable built forms should consider a strong primary massing, complemented by secondary elements such as shading devices, window and doors that enhance the overall expression.

A coherent architectural language that responds to its context helps to reduce complicated detailing and minimise maintenance issues over time.

Efficient and repeatable built forms

Simple repeatable forms

Primary forms with secondary elements for climbing plants

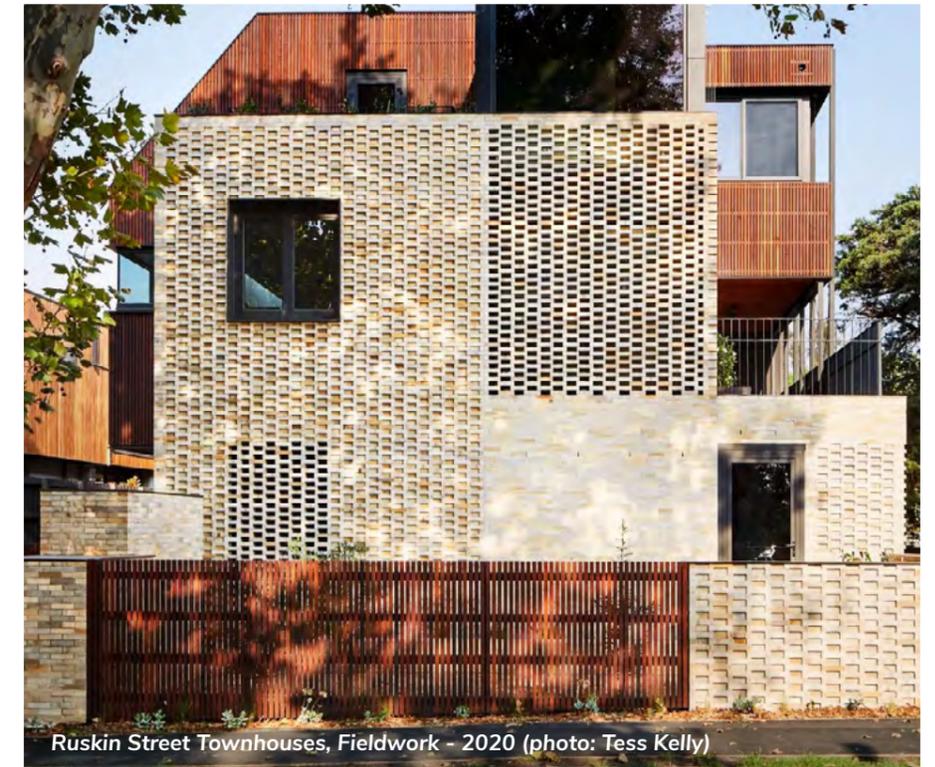

Gaps between forms to enhance the sense of dwelling identity

Forms punctuated with deep recesses

Sheer forms with high quality finishes

Using texture to add interest to simple forms

Broad appeal

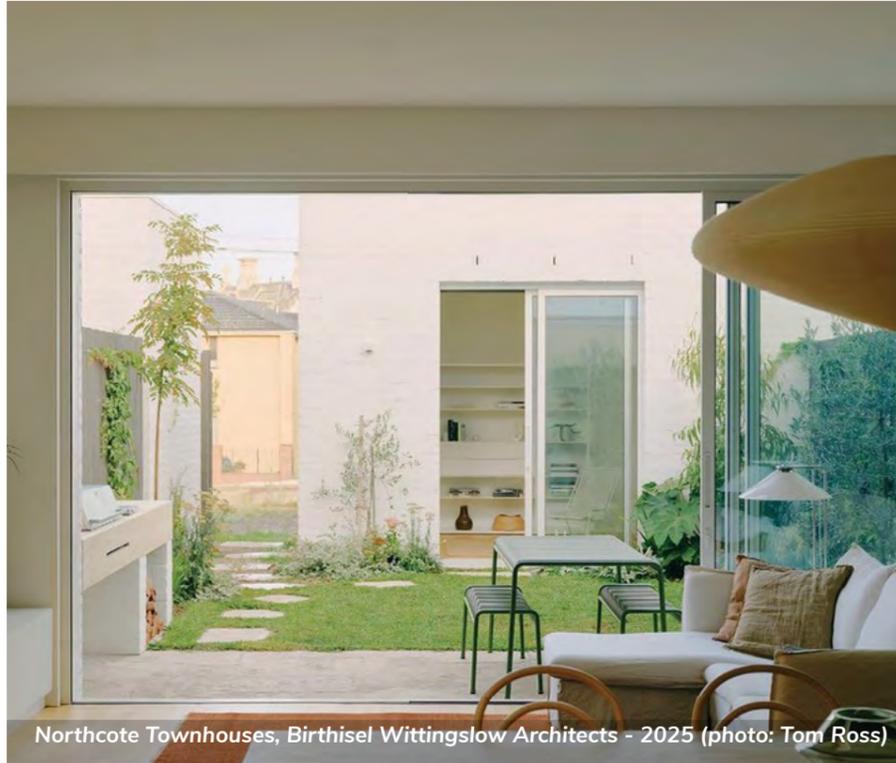

The exemplar designs are configured to appeal to a broad cross section of potential purchasers in Merri-bek.

Broad appeal is achieved through mostly 2 or 3 bedroom layouts featuring ground floor living and strong visual connections to green space and canopy trees. Interior layouts respond to current market expectations, balancing larger dwellings with generous master suites, retreats and studies, alongside more compact configurations.

The Exemplar Designs offer a range of dwelling typologies that can be drawn upon to develop contextually appropriate proposals across different sites.

Broad appeal

Seamless connection to the outdoors

Integrated working from home space

Spaces for families

Street appeal

Spacious ground floor open space

Elevated views to spaces that support canopy trees

Exemplar Designs

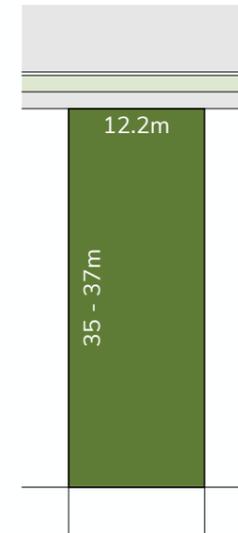

The lots selected for this suite of designs reflect the range of sizes most common in the Merri-bek context, in areas that allow for 1 parking space per dwelling.

While lot depths vary considerably across Merri-bek, lot widths remain relatively consistent, reflecting the rational pre-metric standards of 40, 50, 60 feet etc.

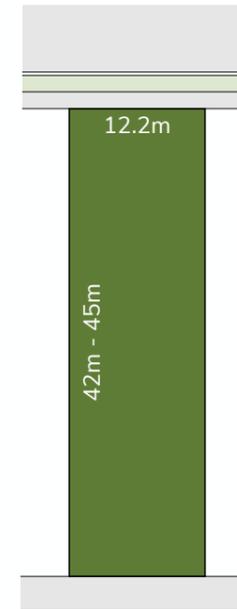

Lots narrower than 12 metres are generally considered unsuitable for standardised townhouse development due to vehicle access constraints. Lot 8 (20 metres wide), however, demonstrates how a layout might work for two smaller consolidated lots.

The focus on repeatable layouts illustrates how each exemplar can be applied and adjusted to suit varying lot depths.

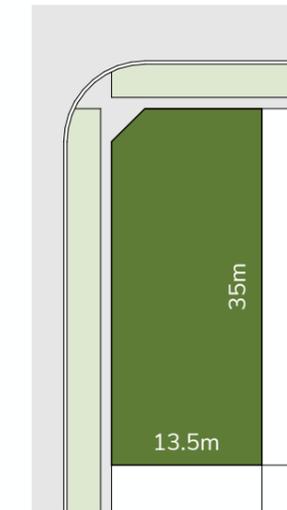

Lot 1
12.2m x 35-37m,
427-451m²

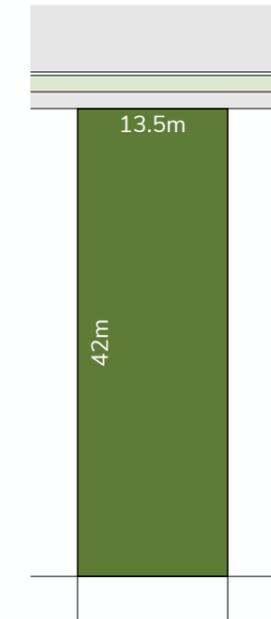

Lot 2
12.2m x 42-45m,
512-549m²

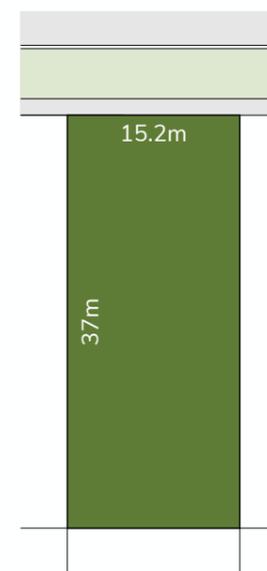

Lot 3
13.5m x 35m, 473m²

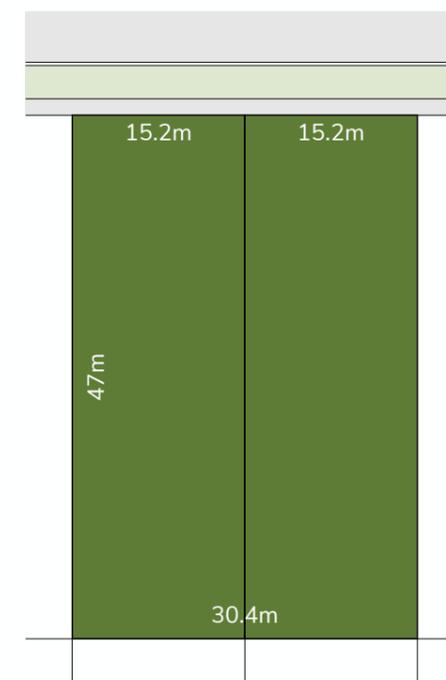

Lot 4
13.5m x 42m, 567m²

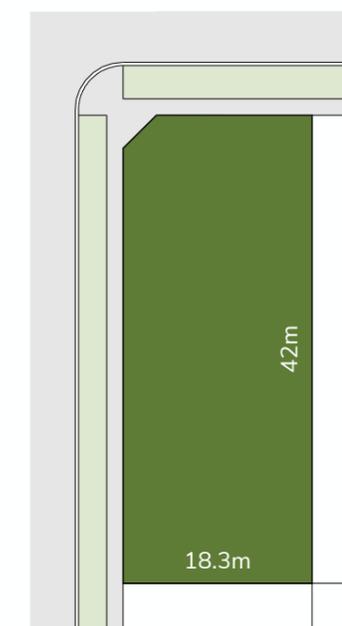

Lot 5
15.2m x 37m, 562m²

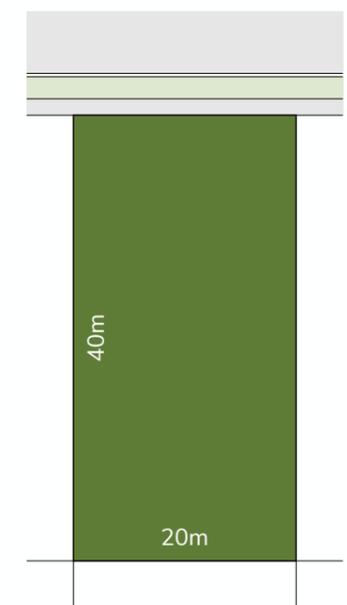

Lot 6
30.4 x 47m, 1,216m²
(consolidated 15.2m wide lots)

Lot 7
18.3m x 42m, 769m²

Lot 8
20m x 40m, 800m²

Lot 1: Exemplar on a 12.2m wide lot with shared basement parking

12.2m x 35m-37m = 427-451m² / 2 storeys / 3 dwellings / 2-3 bedrooms

This exemplar maximises ground floor living space with parking, services and storage tucked away in the basement.

The straight forward form is an elegant solution for a constrained site.

The common access and stair help to build a sense of community within the development.

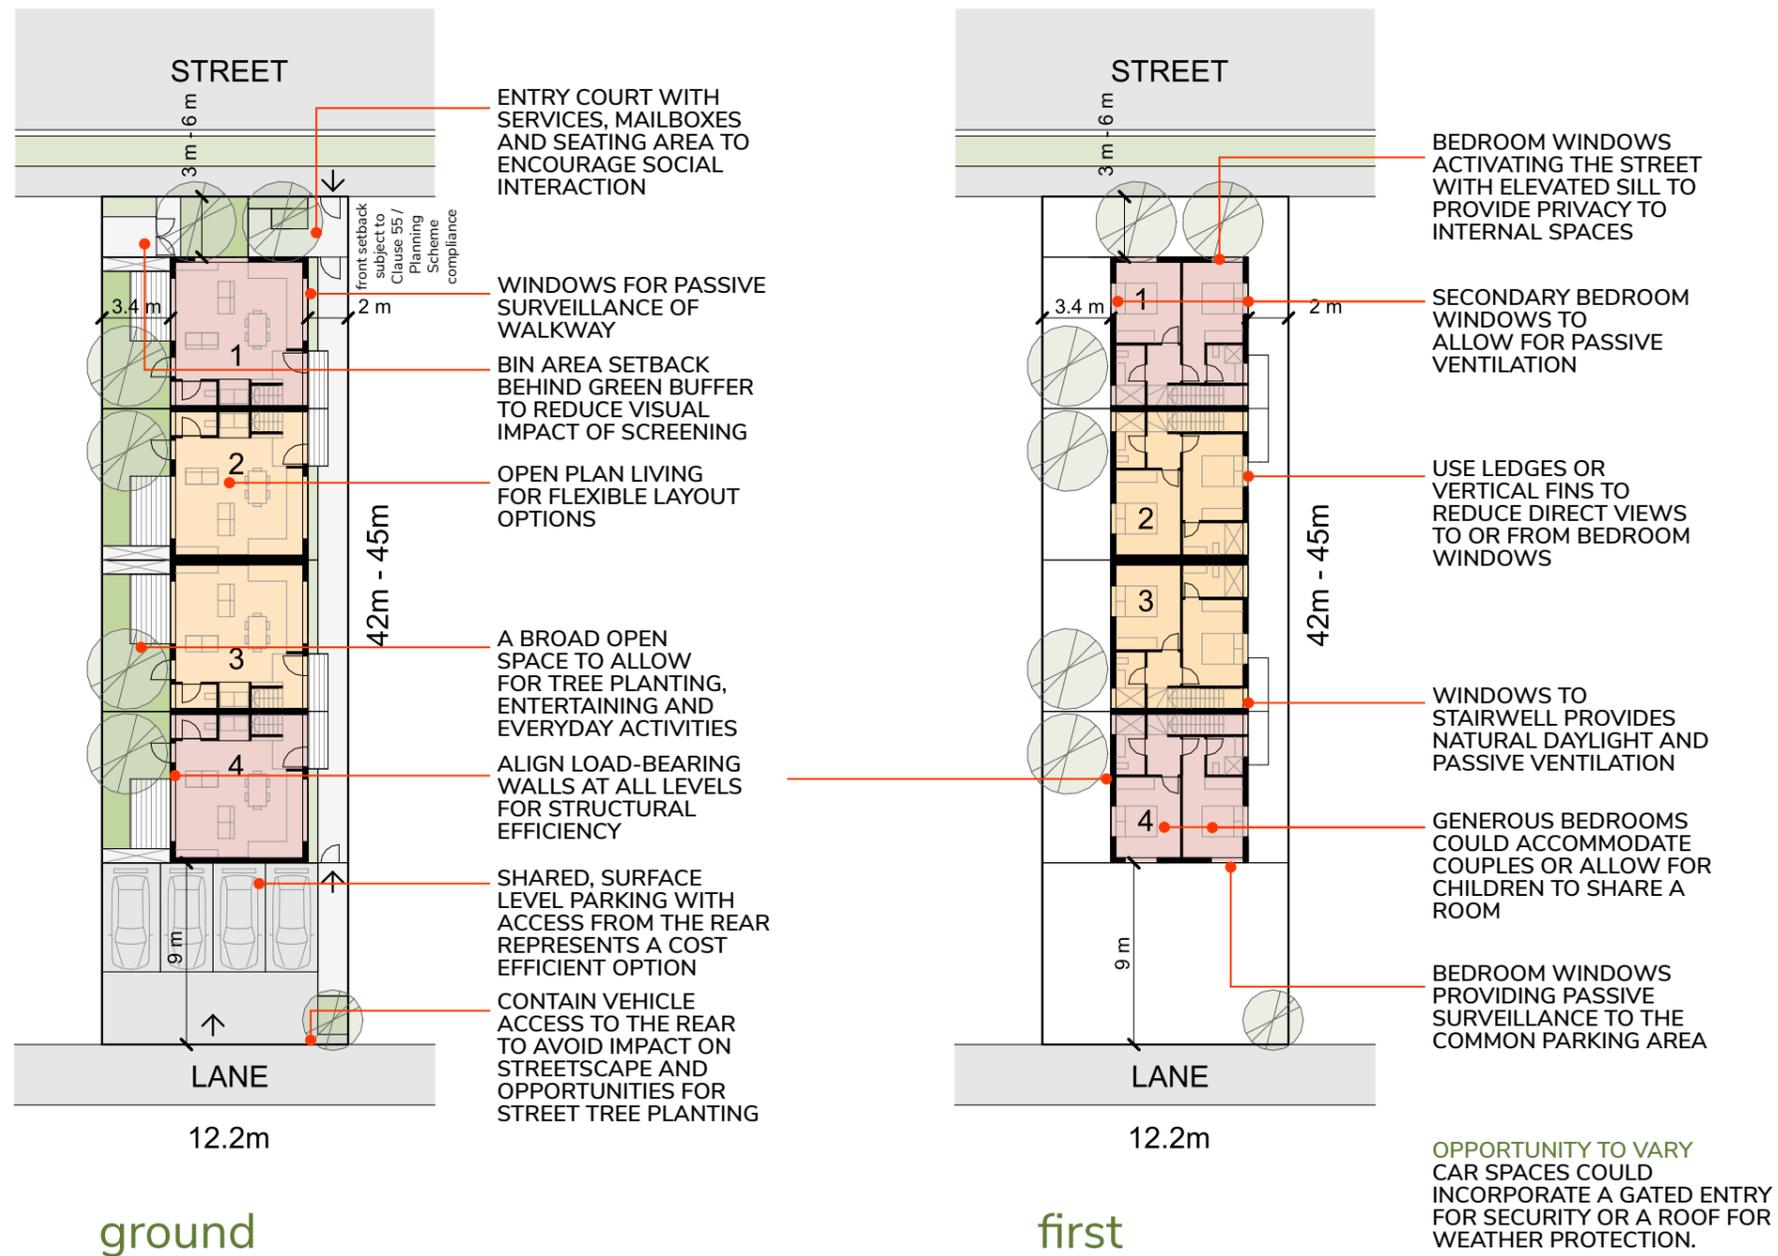

Locate the north point within the shaded area for better solar access

Lot 2: Exemplar on a 12.2m wide lot with shared parking from laneway

12.2m x 42-45m = 512-549m² / 2 storey / 4 dwellings / 2 bedrooms

This exemplar reduces dependence on ground floor parking and access, allowing all dwellings to enjoy ground floor open space and living. The uncomplicated layout and efficient use of the site make these modest townhouses attractive and easy to build. Rear parking access allows for attractive presentation to the street.

Locate the north point within the shaded area for better solar access

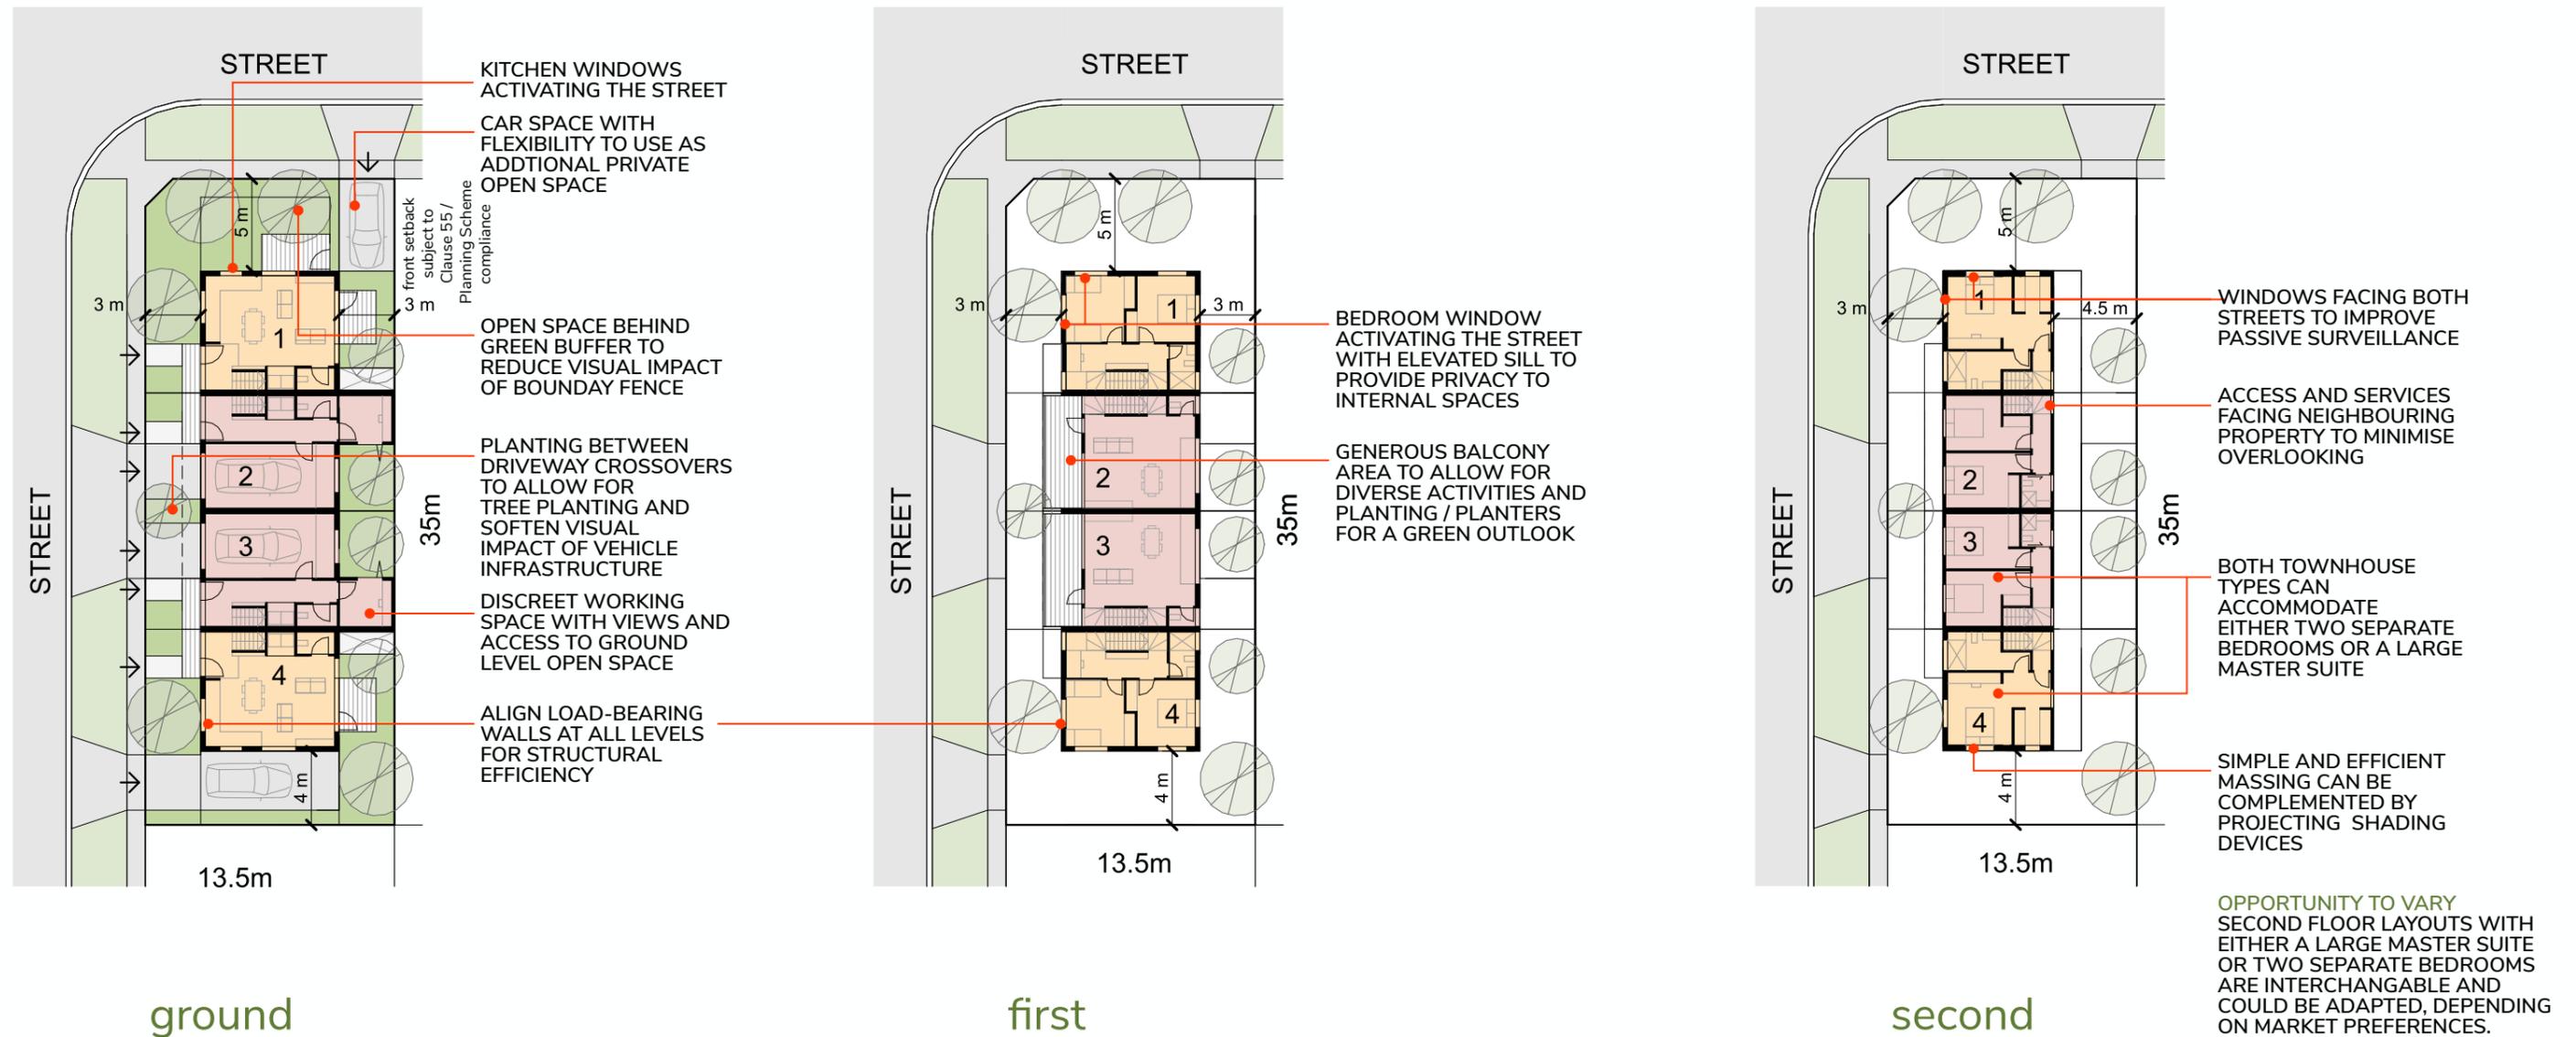

Lot 3: Exemplar on a 13.5m wide corner lot with private garages

13.5m x 35m = 473m² / 3 storey / 4 dwellings / 2-3 bedrooms

This exemplar optimises its corner position to provide a ground floor open space for all dwellings.

The building form is efficient and rational while balcony articulation helps to modulate the form and provide outlook / activation to the street.

A mix of ground floor living and reverse living will appeal to diverse demographics.

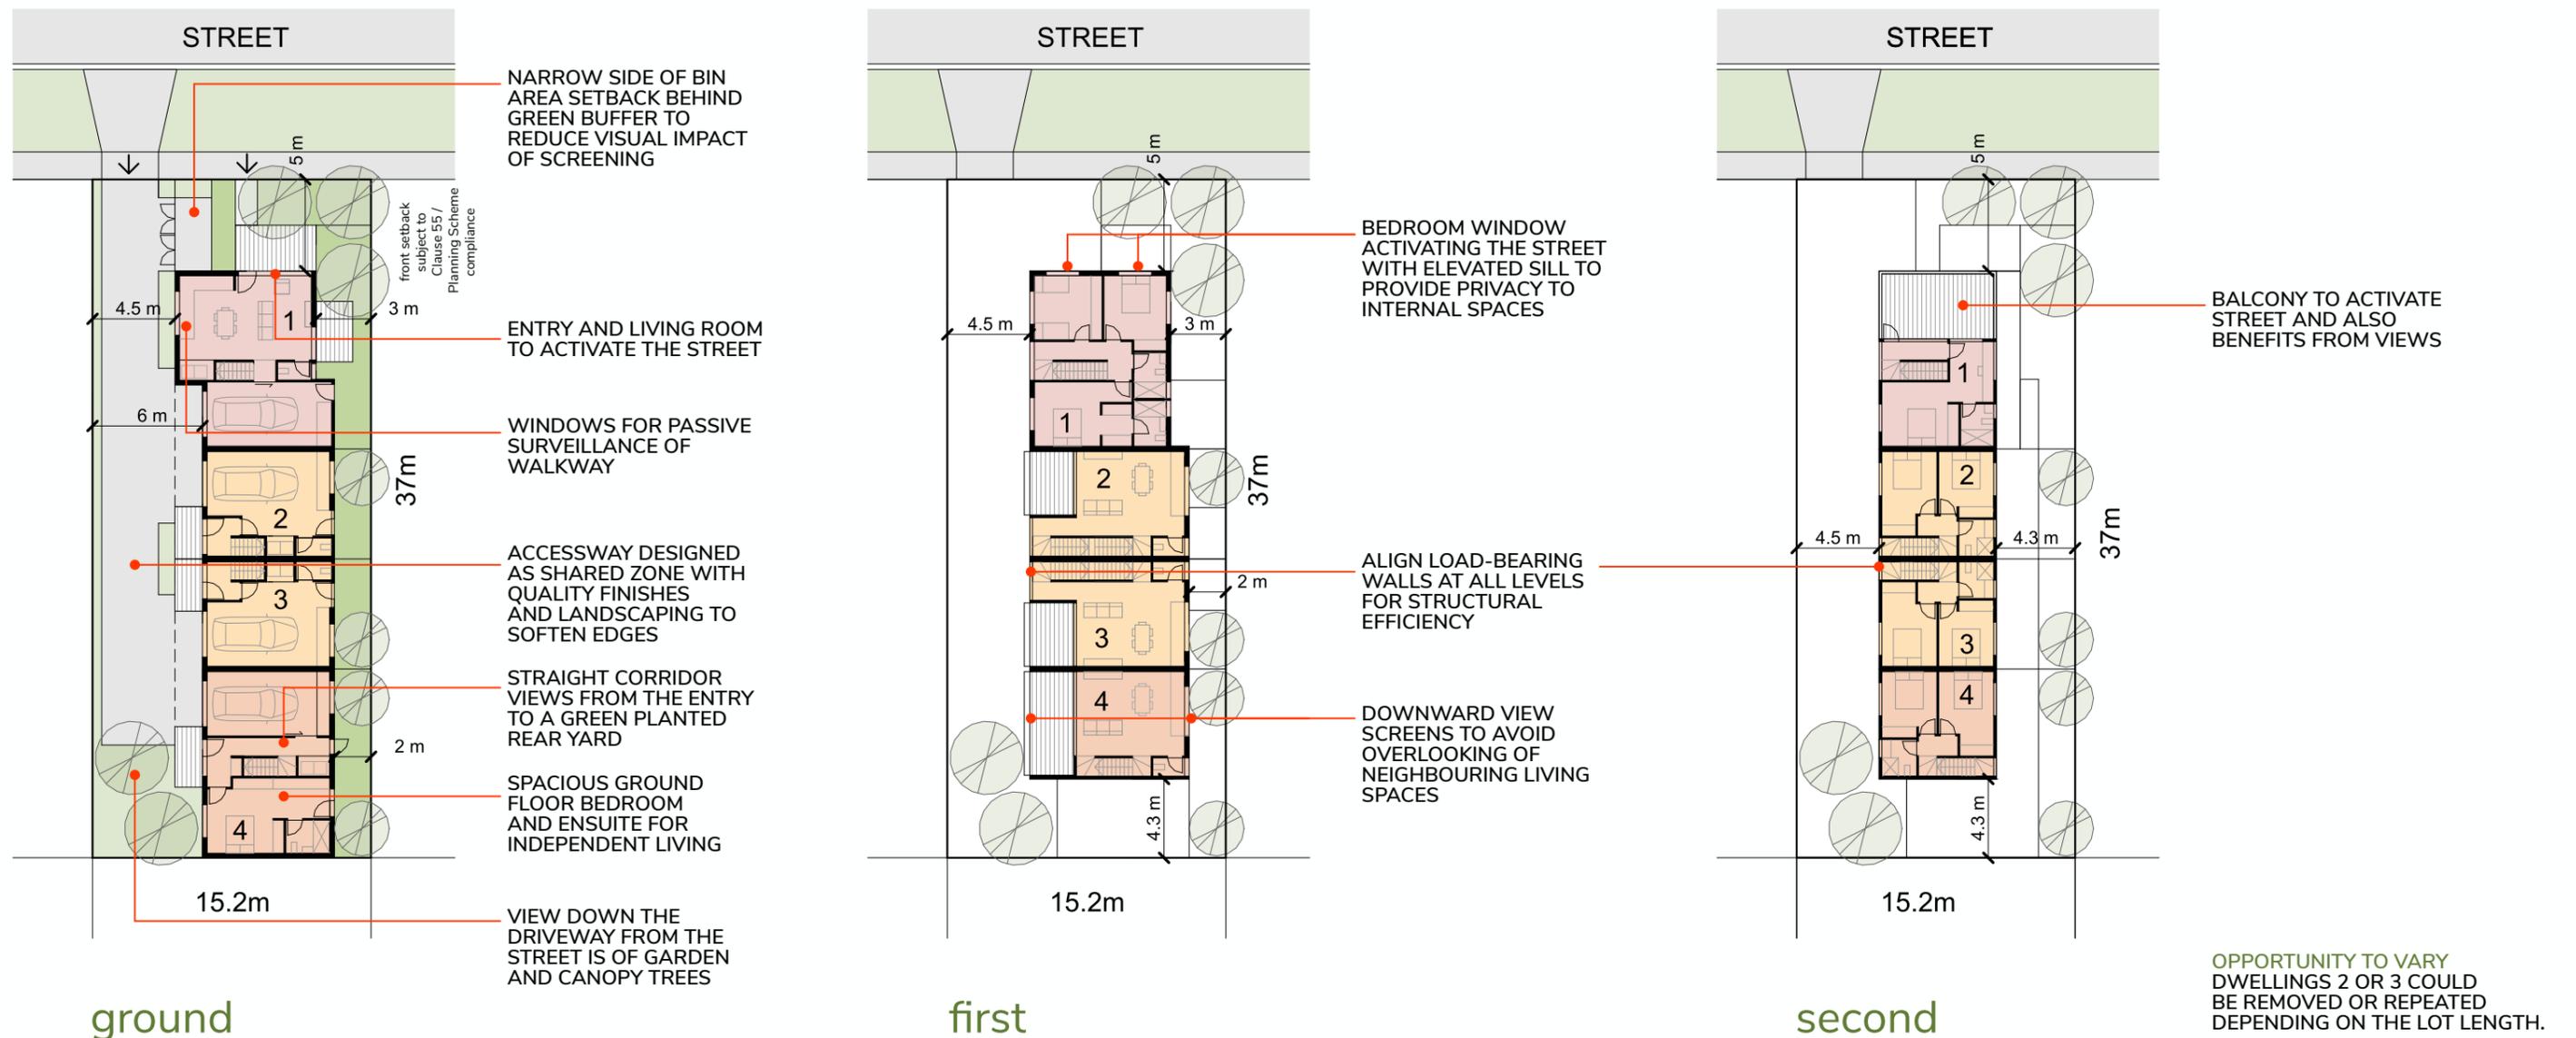

Locate the north point within the shaded area for better solar access

Lot 5: Exemplar on a 15.2m wide lot with private garages from common accessway

15.2m x 37m = 562m² / 3 storey / 4 dwellings / 2-4 bedrooms

This layout provides ground floor open space for the larger dwelling (1) and direct views from the entry to rear yards from other dwellings. The forms are well setback from side boundaries, minimising need for overlooking measures and dwellings 2/3 + 4 could be interchangeable, depending on lot length. The different ground floor bedroom, ground floor living room and reverse living configurations will appeal to diverse demographics.

Locate the north point within the shaded area for better solar access

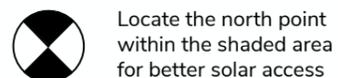

Lot 6: Exemplar on consolidated 15.2m wide lots with private garages

30.4m x 47m = 1,216m² / 3 storey / 10 dwellings / 2-4 bedrooms

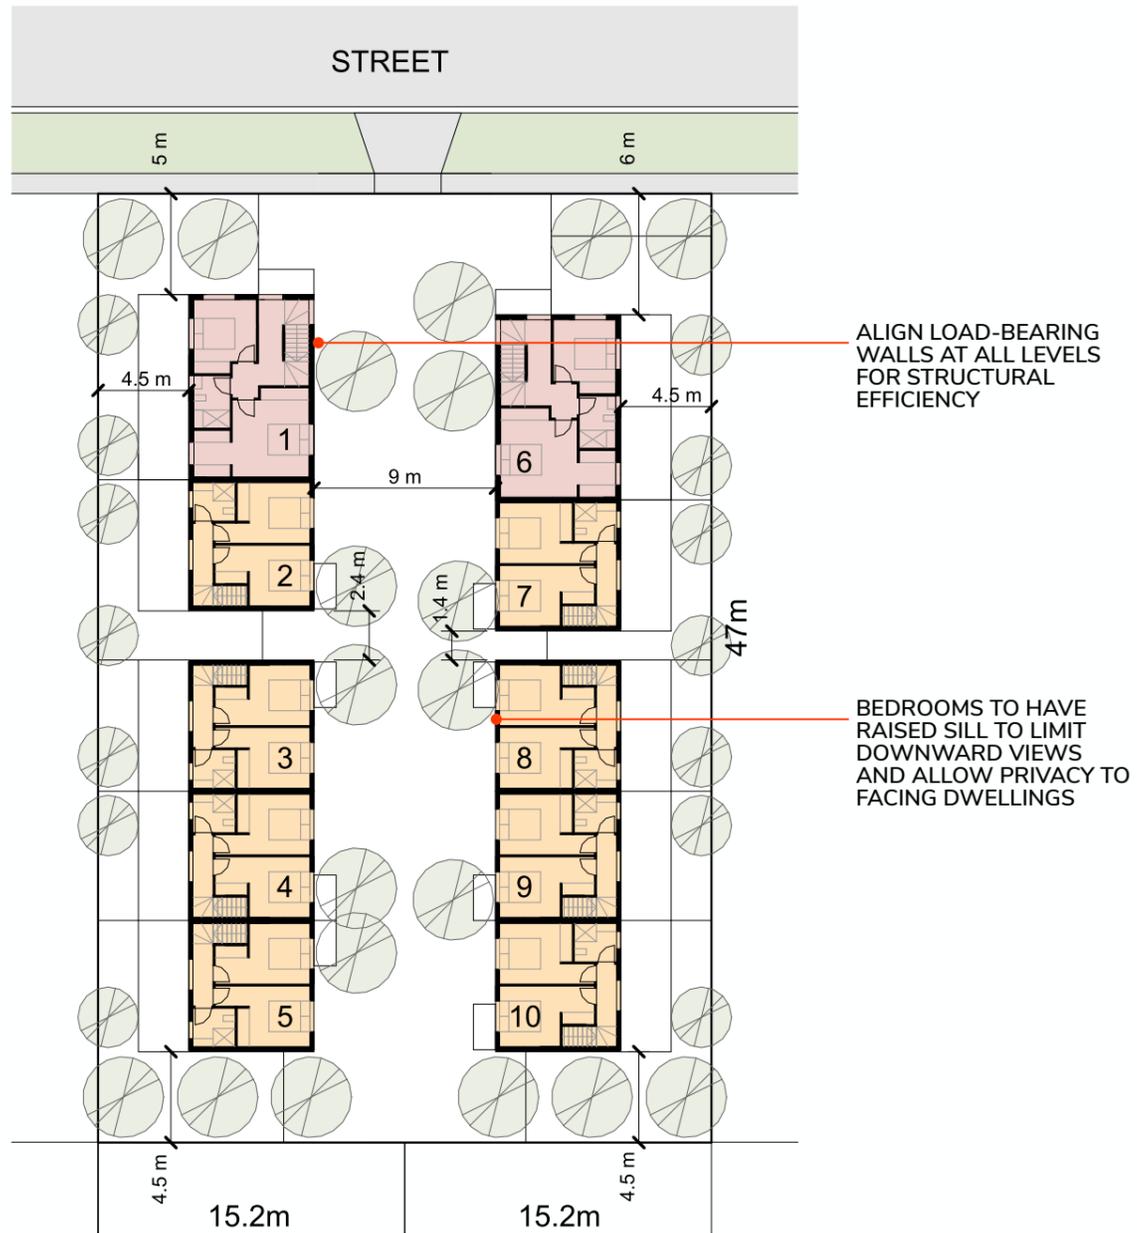

This exemplar turns its primary spatial constraint into an asset, by making the driveway a 'place' with activation and space for canopy trees.

The simple, repeatable form will appeal to those wanting to increase yield through lot consolidation, while maintaining high amenity.

The rear townhouses have modest layouts and will appeal to those wanting to be part of a community and build relationships with neighbours.

Lot 6: Exemplar on consolidated 15.2m wide lots with private garages (second floor)

second

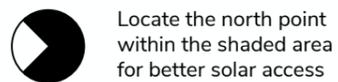

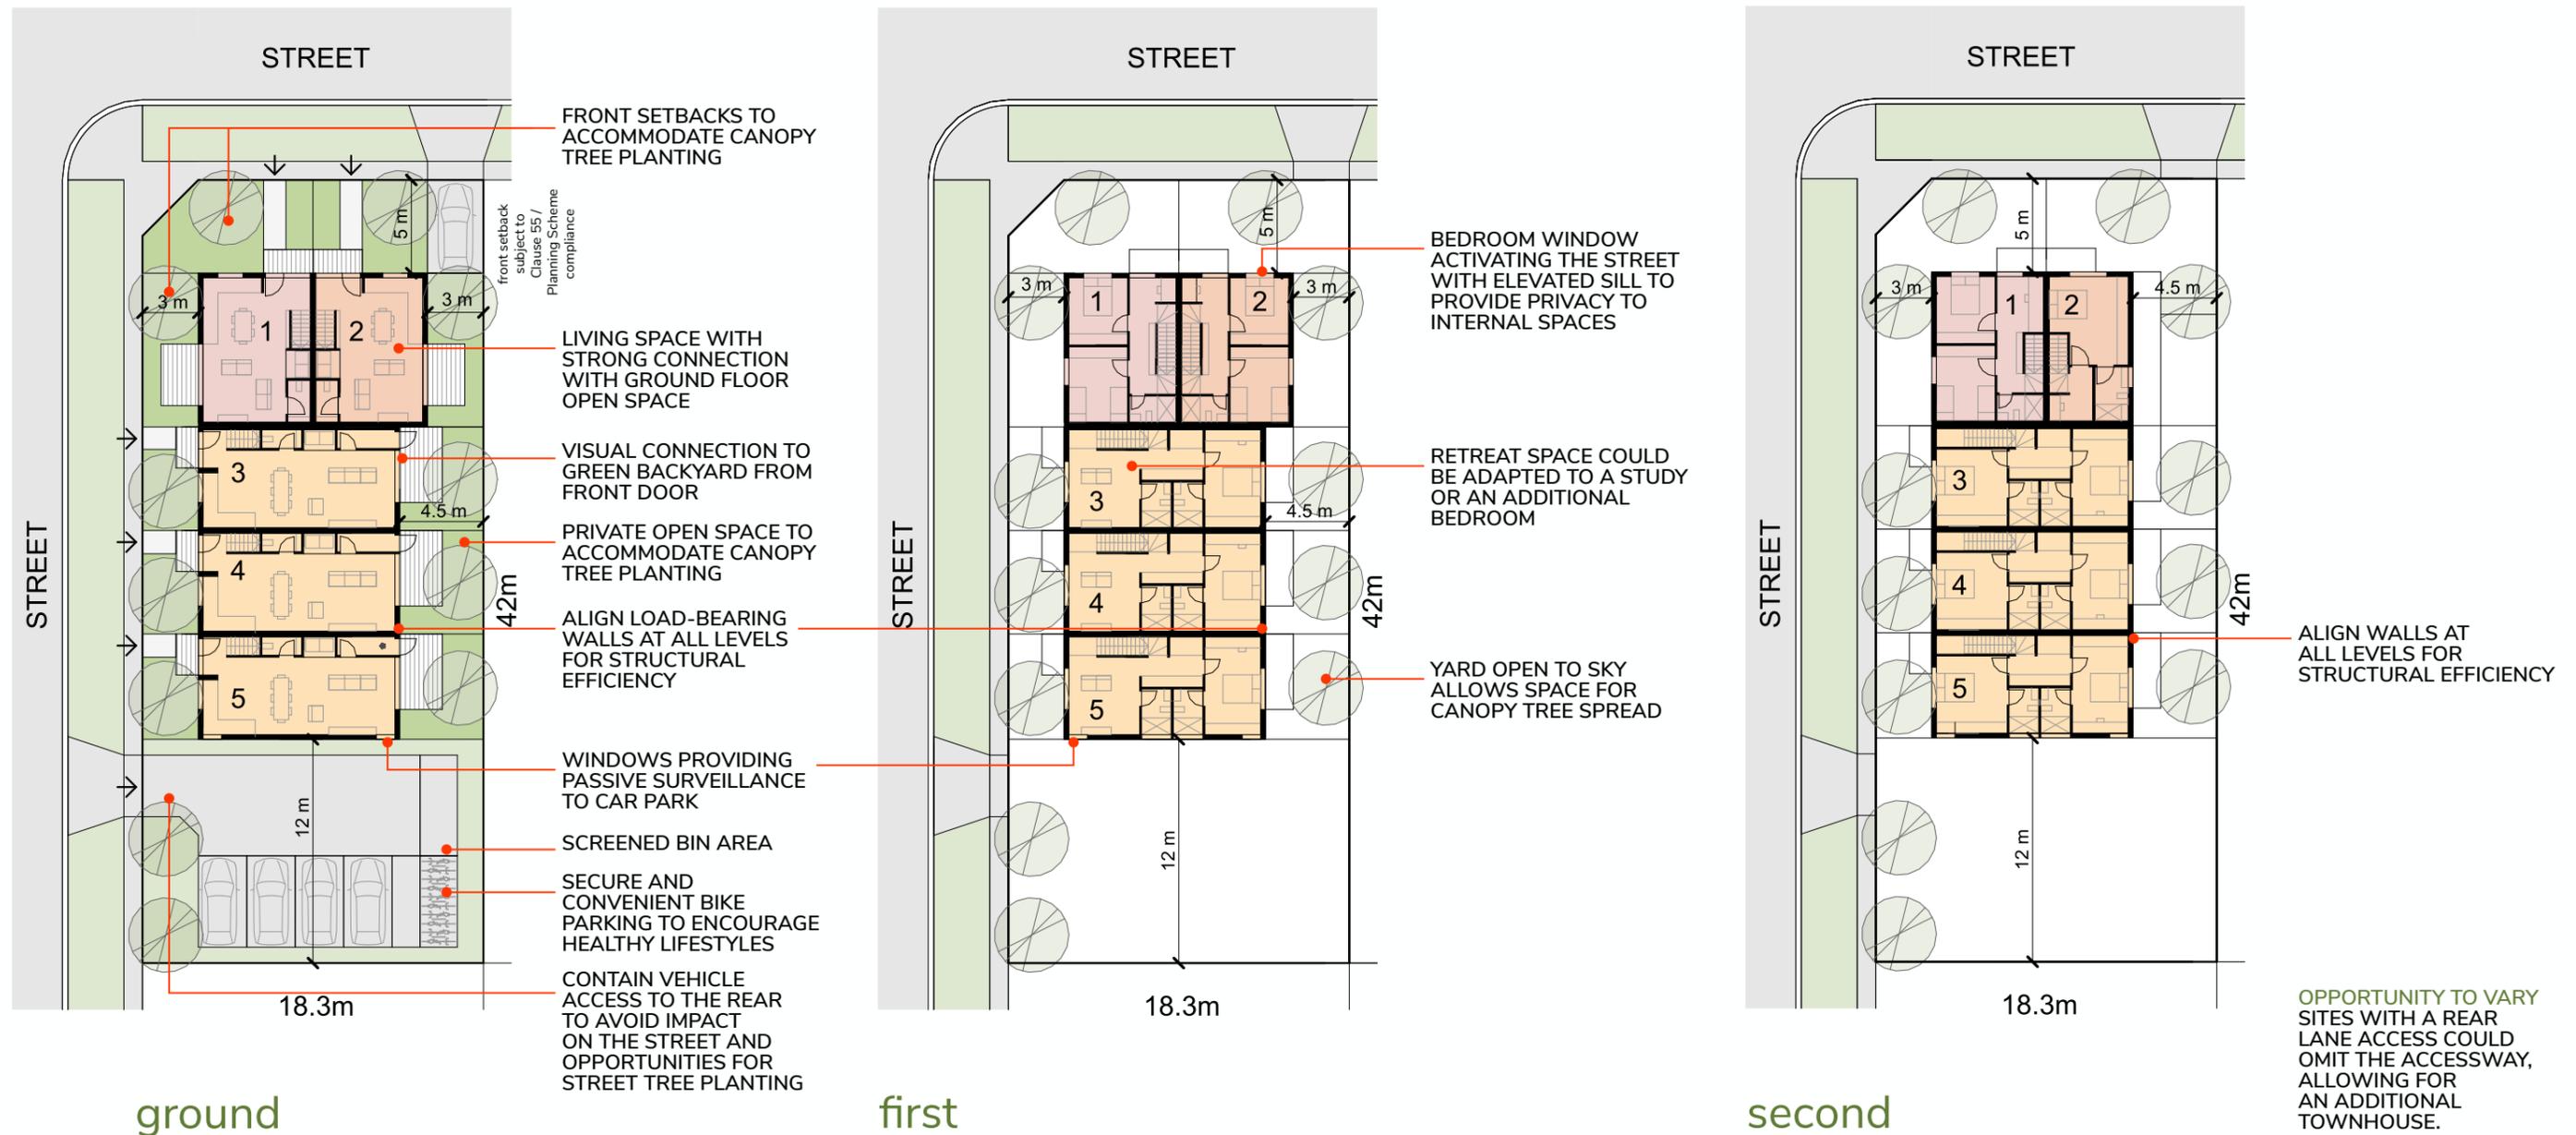

Locate the north point within the shaded area for better solar access

Lot 7: Exemplar on a 18.3m wide corner lot with shared parking

18.3m x 42m = 769m² / 3 storey / 5 dwellings / 3-4 bedrooms

This exemplar minimises vehicle crossovers, allowing for green, treed outlook to the rear (dwellings 3, 4 + 5), and frontages to the street. The form is very simple and efficient, allowing all dwellings to have private yards and surface level parking as a cost effective option. Each townhouse feels private, with its own sense of address. Consolidated cars, bins and bikes will encourage neighbourly interactions.

Lot 8: Exemplar on a 20m wide lot with private garages + shared accessway

20 x 40m = 800m² / 3 storey / 4 dwellings / 3-4 bedrooms

This exemplar consolidates vehicle access to the centre of the site to free up space for private and common yards, and canopy tree planting. The symmetrical forms are subtly articulated to achieve more generous yards, outlook from balconies and private deck areas. These larger townhouses are distinctive with generous layouts and a shared yard area to encourage group socialising or gardening.
