

Final concept design based on community feedback

Having reviewed your consultation feedback, we have adjusted the concept design to include more challenging play for older children. The revised design also now includes more senior elements added to the combination unit and an additional senior dynamic see-saw.

The playspace footprint and positioning of the play equipment have been adjusted to make maximum use of shade from existing trees.

We have retained the proposed colourful transport theme with circuit of play units around an existing tree and simulated 'train track' remain, along with the 'play mound' as an undulating high point, swings and xylophone to engage younger children in particular.

Adjustments have been made to the gathering space area outside the playspace and the furniture inside the playspace.

Construction timelines

Construction starts: early November 2019

Construction ends and new playspace opens: mid December 2019
